INSULATION

## THE UNBEATABLE CHOICE FOR INSULATION

# warmer, safer, smarter, green sustainable

### Why Sheep Wool Insulation?

**We believe sheep wool insulation is the best performing natural insulation available in the marketplace today.**

- ▶ Controls condensation—wool absorbs and releases moisture yet doesn't lose it's thermal performance
- ▶ Improves IEQ by absorbing harmful gases from indoor air, e.g. formaldehyde, and locking them up permanently. Man-made insulation emits gases.
- ▶ A better insulator compared to glass fiber insulation, requiring 10% less thickness to achieve the same insulating factor.
- ▶ Performance is not affected by moisture.
- ▶ Lasts for the life of the building and will not compact.
- ▶ Wool is truly sustainable; a yearly clip of wool is available as a by-product of the livestock farming.
- ▶ Safe to handle and biodegradable at the end of its life.
- ▶ Meets or surpasses US building product standards for Thermal, Fire, Mold Resistance, and Structural performance
